Docket: 80050/US02

## AMENDMENTS TO THE SPECIFICATION

Please amend the paragraph beginning on page 11, line 15 as follows:

In one embodiment, the elastomer is a block copolymer of at least one conjugated diene and at least one monoalkenyl aromatic hydrocarbon. The preferred conjugated dienes are butadiene, isoprene, chloroprene, carboyxlated butadiene, and carboxylated isoprene. Most preferably, the conjugated diene is butadiene [[and]] or isoprene. The preferred monoalkyenyl aromatic hydrocarbon is styrene. Such block copolymers can have a general formula A-B-A or (A-B)<sub>n</sub>X wherein each A block is a monoalkyenyl aromatic hydrocarbon polymer block, each B block is a conjugated diolefin polymer block, X is a coupling agent and n is an integer from 2 to about 30. Such block copolymers can be linear or may have a radial or star configuration as well as being tapered. Block copolymers such as these are well known and are described in U.S. Patent Nos. 4,145,298; 4,238,202; and 5,039,755; all of which are incorporated by reference. The block copolymers can have a number average molecular weight from abut 30.000 about to 300,000, as measured bv ASTM D-5296.
